Volume XI, No. 1 (#59) August 1988 Founded 1978

President's Message--

It is a privilege to serve as president for the next two years. This is an opportunity to repay philately for giving me many years of pleasure.

Thanks to John Hotchner for his many contributions to the EFOCC, especially his guidance during the past two years. It is comforting to know that his wisdom and expertise are an available resource. To the outgoing Board members we say thanks for your contributions and a job well done.

The efforts of many members have produced a financially sound and healthy organization. Your continued support and participation in the Club's activities are essential to insure continued growth.

I remind everyone of EFOCC's commitment to participate in WESTPEX 89 (April 28-30, 1989). This is a great opportunity to get our Club and its interests before the public and recruit new members. We do need your help and look forward to your participation. Please complete and return the WESTPEX questionnaire from the June '88 issue of *The EFO Collector*.

--Louis E. Repeta

The Voyager--

The winter climate in my part of Virginia is miserable. So, last February, my wife and I escaped to the gentle, comforting Caribbean clime-- and, yes, if you remember, we went to Hell (Grand Cayman.)

The summer climate in my part of Virginia is miserable. So, as you read this (God willin' an' the creek don't rise), we're on our way to cooler climes-- this time, Alaska. We may miss Hell but, as you can see from the illustration below, we won't be far from its chief executive officer.

Cover courtesy of John Hotchner.

I'd like to call your attention to a very special item in this issue. It's the index to Volume X (August 1987-June 1988) of this journal, and it represents a tremendous amount of effort by Tim Lindemuth. It sets *The EFO Collector* on the path toward becoming a true publication of record in EFO philately-- one to which scholars and researchers can turn for information. Thank you, Tim.

I was gratified by the membership's responses to my June plea for publishable articles. Now, how about those of you who intended to respond, but haven't done so yet. C'mon, make my day! Qualify for the Robert E. Manning award for 1989! My address is Box 955, Lake of the Woods, Locust Grove, VA 22508.

--Howard Gates

ALL CONTENTS COPYRIGHT 1988 BY THE EFO COLLECTORS' CLUB. Authors and contributors have express permission to reuse any of their material elsewhere without restriction. Except for material reprinted herein, or material individually copyrighted by the author, material herein may be reprinted elsewhere as long as full credit is given to *The EFO Collector*, citing the issue date and number, and giving the address of the EFOCC secretary.

The EFO Collector is published six times yearly in even-numbered months. The deadline for any issue is the 15th of the month preceding the month of issue-- e.g., May 15 for the June issue. Send editorial material directly to the editor.

Membership includes subscription to *The EFO Collector*. Application for membership, accompanied by $13 ($26 overseas) to cover the first year, should be sent to the Secretary.

Advertising for *The EFO Collector* will be accepted at the following rates: first insertion-- full page, $28; half page, $15; quarter page, $8; classified ads, 6c per word. Discounts on subsequent insertions of the same ad: second insertion, 5%; third, 10%; fourth and subsequent, 20%. The first insertion must be fully prepaid. Deadline for ad copy: tenth of the month prior to the month of issue. Advertisements, ad payments and related inquiries should be directed to the Advertising Director.

EFOCC members are entitled to three free 35-word (excluding address) classified ("EFO POST") ads annually. These should be sent directly to the editor.

Francis C. Pogue:

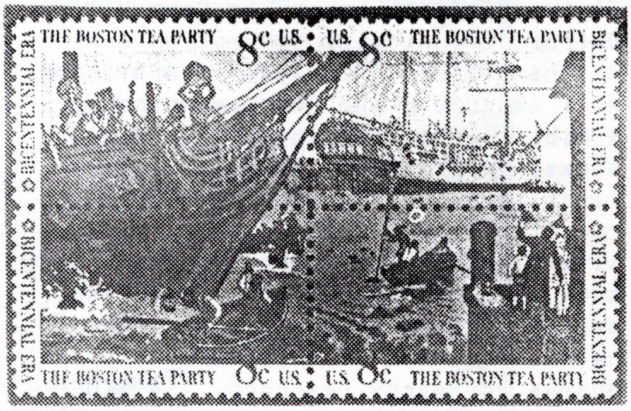

DOUGHNUTS ARE NOT BUBBLES--

A "hicky," "hickey," or "hickie" can be defined in many ways. But to a printer it is a particle of foreign matter that attaches to type, printing die, or offset plate or blanket, and causes a light or dark spot on the printed image. There are many types known on stamps; one of the more spectacular is the "squashed fly", which is familiar to those who have seen Clyde Jennings's EFO slide presentation.

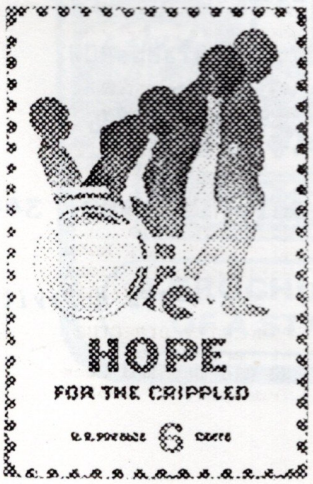

A misunderstood variety, often erroneously called an "ink bubble," is the "printer's doughnut," which is usually caused by a speck of dried ink or other small, solid particle. The hicky itself prints, but its thickness prevents the transfer of ink immediately surrounding it. When one is printed in a strategic area of a stamp, a fascinating design change may result. One of my favorites, shown below, is the "cherry in a cocktail glass" on the 8c Pharmacy issue of 1972 (Scott 1473).

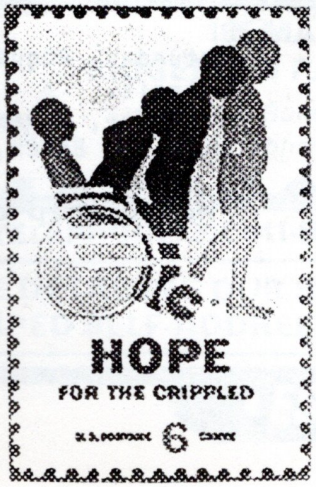

Another dandy is the "life ring," which can be seen descending toward the water in the lower-right stamp of the 8c Boston Tea Party block, Scott 1483a (1973).

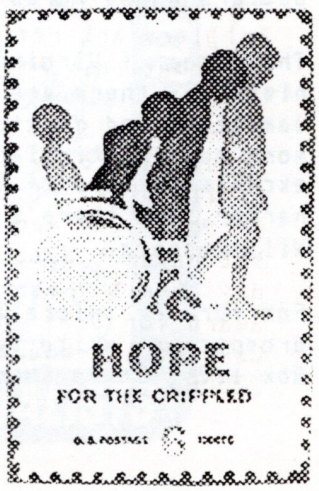

For those of you who still believe that the "doughnut" is caused by an ink bubble, I submit proof that it is not: A "doughnut" can be seen in each of four stamps taken from the same position on four panes, all of which had the same plate number, of the 6c Hope for the Crippled issue of 1969 (Scott 1385). A bubble would have printed just once, if at all, while a hicky can be reproduced until the offending particle is dislodged. Now for the question: In view of the recurring nature of these anomalies, may we term them "plate varieties?"

EXHIBITIONS--

STaMpsHOW 88, Detroit--

It's not too late to plan to attend the 102nd Annual American Philatelic Society Convention and STaMpsHOW, to be held in Detroit August 25-28. This, the largest annual stamp show in the United States, will be housed in Cobo Hall, Detroit's municipal convention center. A "Champion of Champions" competition will feature Grand Award-winning exhibits from prestigious national shows. In addition, there will be a large, nationally accredited open competition and a major philatelic literature exhibit. The theme of the show is the automobile; and you can sample automotive history to your heart's content at the Henry Ford Museum in nearby Dearborn. The EFOCC will meet at STaMpsHOW Saturday, August 27.

VAPEX 88, Virginia Beach--

It's not too early to plan to attend VAPEX 88, to be held November 18-20 in the Pavilion, the Virginia Beach, Virginia, convention center. The Pavilion Tower Hotel, in the same block as the convention center, offers special VAPEX rates.

EFOCC members will get together for their annual Dutch-treat breakfast on Saturday morning, the 19th. And there will be a swap-and-shop EFOCC meeting. The show's exhibits will include EFO material, and there will be lots of dealers whose wares it's fun to peruse.

This area of Virginia abounds in history-- there are Williamsburg and Jamestown and Yorktown to visit. For more modern stimulation there are excellent tours of the great Norfolk harbor, and there's Busch Gardens near Williamsburg.

For further information and a prospectus, write John Hotchner, P.O. Box 1125, Falls Church, VA 22041.

SECRETARY'S REPORT--

Welcome--

to Life Member-

LM-15- Dr. Jim Benedict, 1130 N. Cabrillo, San Pedro, CA 90731.

to new members-

659- Dino Vardavas, P.O. Box 4261, Warren, OH 44482; *PNC's, all U.S., Greece.*
660- Dr. Frederick C. Skvara, P.O. Box 6228, Bridgewater, NJ 08807.
661- Ronald Bickel, P.O. Box 516, Belton, TX 76513.
662- Anne K. Gratz, 44 Old Stone House Road, Carlisle, PA 17013.
663- Donald V. Wheeler, 17437 Hemmingway St., Northridge, CA 91325.
664- Richard C. Schulman, 8 Talbot Lane, Smithtown, NY 11787; *U.S. and postal stationery.*
665- Hazel Morgan, 1491 North 47th Street, Baton Rouge, LA 70802.

Welcome back to-

454- Thomas E. Smith, P.O. Box 23149, Phoenix, AZ 85063.

For recruiting, our sincere thanks to-

Sam Houston Philatelics (Bob Dumaine); Howard Gates; Mark Congelio; Scott Shaulis; Scott's Publications.

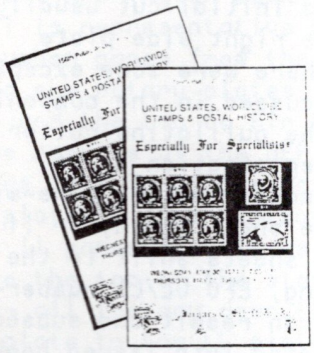

Reminder: Our club will meet-

Saturday, August 27, at STaMpsHOW, Detroit.
Saturday, November 19, at VAPEX, Virginia Beach, VA.

Membership on July 1, 1988: 344.

Bruce H. Mosher and George V. H. Godin for the Booklet Study Group:

U.S. 180/360 SUBJECT, ROTARY PRINTED, 100% PLATE NUMBER BOOKLET PANES--

During the 50-year period from August 1926 to March 1976, the POD/USPS issued many different designs of six-subject booklet panes and one three-subject design which were printed from over five-hundred 180/360-subject, uniquely numbered, rotary plates. These variously issued booklet panes contained postage stamps with all denominations from 1¢ to 13¢, except 9¢ and 12¢ stamps. One common attribute has been shared among almost all of these rotary booklet pane issues -- the lack of imprinted plate numbers on the normally cut panes. This significantly contrasts with the majority of the earlier 360-subject, flat-plate, booklet panes which were printed with a plate number within the normal selvage area of one pane per printed sheet. Thank goodness for the BEP's generation and booklet binding of miscut EFO rotary-printed booklet panes, so collectors could continue to obtain plate number panes for their collections.

The BEP's 180/360-subject, rotary-press, book-stamp sheets were imprinted with a five-digit plate number along the UL, LL, UR and LR corners of the sheet. The standard collector-adopted convention for identifying upper and lower plate number positions on the 180/360-subject rotary booklet panes is to place the pane's selvage at the top, regardless of the orientation of the stamp designs on the pane. Then the UL, LL, UR and LR number positions can be consistently located and discussed.

Many unintentionally miscut booklet panes which show portions of these plate numbers have been purchased from the POD/USPS when they were available. This article will explore the UL and LL 100% plate number panes which have been found by collectors while a companion article in the next issue of the EFOC will address the UR and LR number panes.

The BEP normally began guillotine cutting of the collated stack of the rotary book-stamp sheets and their covers at the right edge of the stack in order to cut them into individual booklets. This initial cut usually trimmed off the right side plate numbers, but there were some exceptions as will be discussed in the companion article. If the guillotine cutter loses stamp gutter registration as it progressively makes booklet pane-wide cuts across the sheet width, or if any of the stacked sheets shift to the right prior to cutting, EFO UL/LL number-bearing panes can result and subsequently be fastened into issued booklets.

The Figure 1 illustrated booklet panes represent the less commonly found, but highly sought after, one-hundred percent plate number EFO panes. More frequently partial plate number panes were found among the EFO 180/360-subject rotary booklet pane issues. But, of course, normal numberless panes have been the most commonly accumulated and collected variety. Over the 50-year plus history of these rotary pane issues, plate number booklet pane collecting of the 180/360-subject issues has become quite popular, and quite a few different 100% plate number panes have been found and retained by collectors.

Co-author Godin has been keeping a computerized list of the booklet panes in collector's hands that exhibit identifiable plate numbers. Recently received reports of 100% number booklet panes from EFOCC members Phil Beutel, Earl McAfee, Mike Perry, Frank Pogue and Lou Repeta are gratefully acknowledged and they have all been added to George's list. We are now publishing a consolidated tabulation of the known 100% number panes in Table I for the first time in the philatelic literature. Table I includes all of the UL and LL full numbered booklet panes from George's current computer file. Only panes which have been seen with a full 100% of the five digit plate number are included in this tabulation.

Bruce Mosher, P.O. Box 3236, Indialantic, FL 32903

U.S. 180/360 Subject, Rotary Printed, 100% Plate Number Booklet Panes--

(Continued from the preceding page)

The 2-cent Washington booklet pane in Figure 1 is representative of the LL plate number panes from the BEP's pre-electric eye rotary plates. The 3-cent Liberty and the two 6¢ Air Mail panes show the results of the BEP book-stamp printings from Type II electric eye (EE) rotary plates[1]. The horizontal EE bars on Type II panes are always directly opposite the top of the stamps to their right -- all the way down the left side of the plate to the LL plate number. These EE bars are very visible on the 3¢ Liberty and 6¢ DC-4 panes in Figure 1.

However, the BEP exclusively located the Type II EE bars much further to the left on their 6¢ Transport Plane air mail, 180-subject, book-stamp plates. Thus the left side EE bars do not show on many EFO panes of this issue, not even on the no. 22980 huge miscut pane illustrated in Figure 1. BEP Type II plates were also used in the second printing of the 1¢, 2¢ and 3¢ Prexy booklet panes (the 2.5mm horizontal center stamp gutter variety) and they all contain the more normal EE bar locations.

Figure 1. Miscut 100% Plate Number EFO Booklet Panes. In the top row -- the left pane is from a pre-EE plate, the middle two panes are from EE Type II plates, the right pane is from an EE Type IV plate. The bottom left pane is from an EE Type IV plate, the right pane is from an EE Type II plate.

Continued on the next page

U.S. 180/360 Subject, Rotary Printed, 100% Plate Number Booklet Panes--

(Continued from the preceding page)

Type IV rotary book-stamp plates[1] were put into use by the BEP beginning with the dry printed Scott 1035a (3¢ Liberty) and C39a (6¢ DC-4 plane) booklet pane issues. The 13¢ Liberty Bell and 8¢ air mail booklet panes in Figure 1, plus the panes in Figure 2 (except for the LL 21995 pane), plus the Figure 3, 4 and 5 panes are all from Type IV plates. The 13-cent Liberty Bell pane in Figure 1 is miscut far enough to the left to contain the entire 8.4mm length of the Type IV EE bars. The 6¢ and 10¢ stamp panes in Figure 2 and the 1¢ foldover pane in Figure 3 also show complete EE bars in their foldover appendages. The Type IV EE bars were not identically placed opposite each booklet stamp position as can easily be seen in the cited figures.

George's computer file. Interestingly, only 42 of these plate number panes (7.47%) have not been reported in any measureable UL or LL percentage. These unreported and very hard to find plate numbers are listed in Table II.

Before closing out this report, we'd like to point out some of the interesting characteristics of the 100% number panes that we've been discussing:

1. Most of the 100% number panes are the result of severe left miscuts as illustrated in Figure 1. However, several reported items are foldover EFO panes like those shown in Fig. 2.
2. An unusual pair of both miscut and foldover EFO booklet panes with each exhibiting 100% of the same LL plate number are illustrated in Figure 3.

Figure 2. Foldover 100% Plate Number EFO Booklet Panes

A quick summation from Table I reveals that 95 of 562 (16.9%) of the possible UL full plate number issued panes have been reported while 136 of 562 (24.2%) of the LL positions have been reported by collectors. Since many of the 360-subject pane designs have not had any 100% numbers reported, their maximum number percentages which have been reported to date are given in Table I. We do not anticipate that Table I is a totally complete list as certainly more 100% number booklet panes have been collected, but many have not as yet been reported.

All 562 180/360-subject, rotary printed, book-stamp plate numbers are recorded in

3. Note that on the few booklet pane issues where the stamp designs are oriented sidewise relative to the horizontal pane selvage (i.e., Scott 1284b, C39a, C51a, C60a, and C64b/c), the left side plate numbers are printed upside down relative to all the other 360-subject rotary book-stamp plates. This can be seen on the cited pane issues illustrated in Figures 1 and 2. This number orientation difference must be recognized when trying to identify small percentage plate numbers on EFOs of these booklet pane issues.

Continued on the next page

U.S. 180/360 Subject, Rotary Printed, 100% Plate Number Booklet Panes--

(Continued from the preceding page)

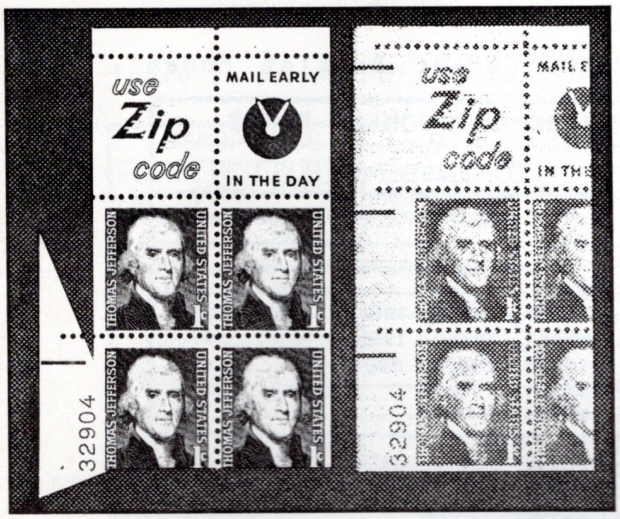

Figure 3. Miscut and Foldover 100% Plate Number Booklet Panes

4. It is unusual for a 100% number miscut pane to be cut wide enough to show the entire design of all six pane-stamps. Three examples of these rarities are illustrated in Figure 4 and another is shown in Figure 5 (we wonder how many plate block collectors have these, or similar, booklet pane 'plate blocks' in their collections). The 13-cent Liberty Bell booklet pane in Figure 4 is noted as being unique in that its 37345 plate number was mis-entered by the BEP plate engraver[2].
5. The six reported Scott 807a (3¢ Jefferson) plate number booklet panes with 3mm vertical gutters[3] (see Table 1) are the only complete reported set of UL and LL 100% number panes from a single rotary booklet pane design.
6. The Scott 1395b, 8¢ Eisenhower booklet panes are the next closest complete design set of reported 100% UL and LL number panes. The elusive UL 32910 and LL 32908 full number examples have, however, been respecively seen with 99% and 90% numbers.
7. Figure 5 shows a matching pair of 100% UL and LL number panes from the Scott 1280c shiny gum issue. This pair is just one of 57 matching full number pairs listed in Table 1.

Figure 5. Matching Pair of 100% Plate Number EFO Booklet Panes

Figure 4. Full Stamp Design 100% Plate Number EFO Booklet Panes

Now that the Table I and II listings have been printed, we hope that EFOCC members who possess some of the unlisted full number panes, or have any percentages of the unreported numbers, will get in touch with co-author Godin to report their potentially unique holdings. He would also be glad to hear from you if you think that you have any high number-percentage panes with which he could update his files. George can be contacted at 208 Brentmoor Drive, Belleville, IL 62223. Thanks for helping to update our EBSG booklet pane plate number survey!

★★★★★

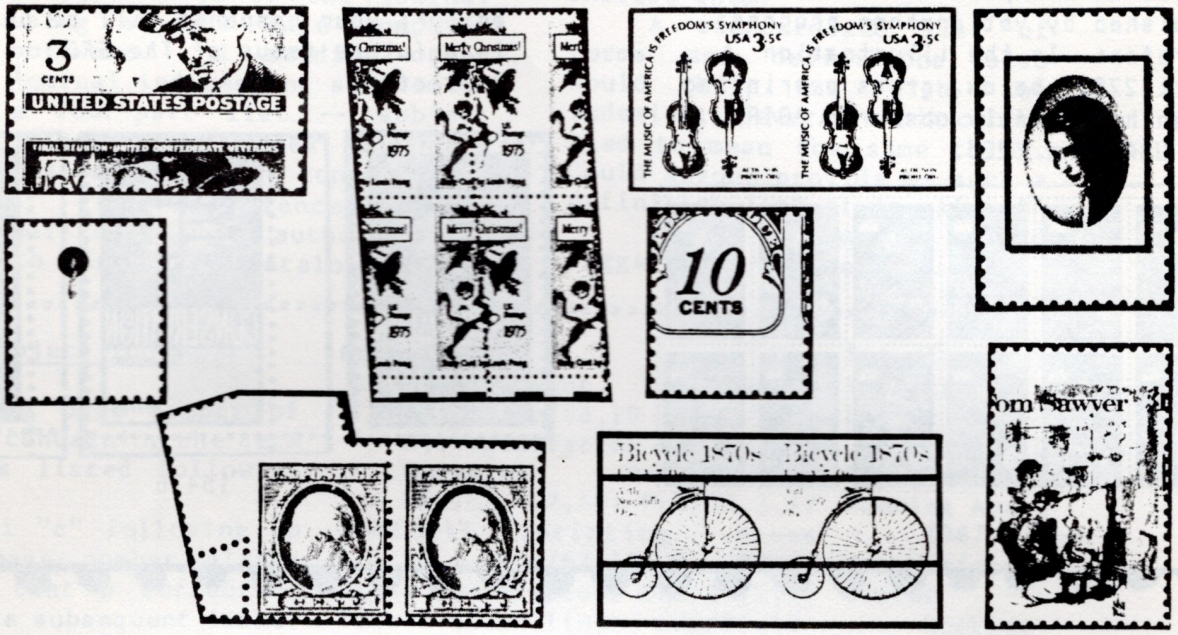

Mosher's Roses--

The December 1982 *EFO Collector* carried an article entitled "1978 U.S. Roses Book Stamp Research Project" in which Bruce Mosher (EFOCC #68) summarized his then known normal and EFO varieties of the Scott No. 1737a roses booklet panes. His stated intentions for researching these booklet varieties were "to have the results of my roses EFO research published in a philatelic journal that will print color illustrations of all the EFO booklet panes of this issue", and "to alert the EFOCC membership .... of the specific publication that carries my research article".

We can now report the completion and publication of his research article in the July 1988 issue of *The American Philatelist*. Color illustrations of three EFO roses booklet panes, which are discussed in Bruce's article: "A Very Colorful Issue -- Three-Color Roses Booklets Exhibit a Variety of Errors," are featured on the front cover of this issue of *The American Philatelist*. The EFOCC is Affiliate #103 of the APS and we are glad to announce the APS' publication of an EFO research article by one of our members. If you enjoy booklet pane EFOs, don't miss Bruce's APS article!

Whither Inscriptions?--

Illustrious member Earl McAfee offers an addendum to "Missing Inscriptions and How They Vanished". That April 1988 article enumerated ten possible causes for the disappearance of legends from stamps-- double sheeting, foldovers, misperforation, etc., etc. Earl has submitted an example of an inscription extinguished by yet another process: *obliteration.* In the illustration of Scott 2251, below, gross overinking of green has totally obscured "GIRL SCOUTS USA" and "22".

Is This a Record?--

The 10c Energy Conservation issue, Scott 1547 (1974) has three Scott-listed missing-color varieties. 1547a lacks blue and orange; 1547b is missing orange and green; and 1547c has just the green absent. Excluding the Bicentennial souvenir sheets, do you know of a stamp that can beat this record? If so, drop a card to the editor; your response will be published in a future issue of *The EFO Collector.*

Tim Lindemuth:

INDEX TO VOLUME X (Aug 1987-Jun 1988) of *The EFO Collector*--

To anyone performing serious philatelic research, a journal index is an invaluable tool.

This is the first attempt at producing a comprehensive index for "The EFO Collector." It is also the beginning of a 10-year index of the journal using a data base computer software. I studied other journal indices and settled on a four-part list -- subject index, stamp index, author's list and table of contents.

I experienced some difficulty where authors failed to list Scott Catalog numbers of stamps described in their articles. I used my best judgement to locate the items in my catalogs, but this open the chance for error of interpretation. In the future, would all authors please include them?

A standardized list of terms and definitions also would help me with the indexing. Several words can be used to mean the same thing. Could anyone provide me such a definition list if it exists?

Your comments and suggestions are welcome.

==========

Part 1 -- Subject Index

The beginning page number of the article containing the term or stamp is listed following the year.

A small "c" following an article's page number alerts the reader that a correction was made in a subsequent issue. A capital "C" following a page number is a correction.

INSTRUCTIONS:
Fill in all boxes with underlined headings. Leave the others blank. Then mount your lot here. For covers, multiples, or other lots, use the reverse side of the form or another sheet of paper or cardboard (better). Be sure to include this form if the lot is mounted separately (attach it to the lot, if possible).

Send your lots by registered or insured mail for your protection.

Extra forms are available for 4¢ each and a SASE. 10 for 1 oz., 20 for 2 oz.

For Auctioneer's Use

Manning Award to Clyde Jennings--

The winner of this year's "Robert E. Manning Award" for the best original article in *The EFO Collector*, Volume X (August 1987 to June 1988), is Clyde Jennings. His article, "Cracked Plates and Fractured Skulls," published in the October 1987 issue, was an outstanding example of the type of writing our members can provide when they share their philatelic knowledge with the rest of us. Mr. Jennings wove together years of hunting, research, and obvious pleasure into a presentation that any reader could understand, learn from, and enjoy. Other close contenders for this year's award were A.S. Cibulskas, Dennis Ryan, and the Booklet Study Group.

The 1988 Manning Award Selection Committee comprised the three previous winners, Earl McAfee, Howard Gates, and Frank Pogue. Clyde Jennings will replace Earl McAfee on the Committee charged with selecting, in 1989, the winner for Volume XI of *The EFO Collector*. Winners receive free dues for the year after their selection plus a $25 cash award. All contributors are eligible except members of the Committee and elected officers of the Club.

Others are urged to follow Mr. Jennings's lead: Put your collecting experiences into the form of an article that you send to the editor, Howard Gates, Box 955 LOW, Locust Grove, VA 22508. You may become an award recipient!

--*Earl McAfee*, Chairman

J.E. McDevitt, 1903 Village Rd.,
